

DOWCO Inc.

DOWCO unveils its cover compression tool in order to make those big covers small. Motorcycle covers can now travel with riders on the back of their bike with the help of this space-minimizing tool. With four cinch straps and two compression pockets to squeeze the cover down to its minimum size and two sizes to choose from (one for small, lightweight covers and one for large heavy-duty covers) every shop should have a few of these on the rack for a quick, easy buy for those that are looking for covers.

George's Garage

Now here's something that belongs in every Harley mechanic's toolbox: the George's Garage wheel bearing remover and installer. The latest addition to the company's rapidly growing line of high quality tools designed specifically for Harley-Davidson motorcycles, this kit is designed to remove and install sealed-type bearings without damaging the wheel. Also shown is the optional 25mm wheel bearing shaft and installer pilot for use on 2007 Softails. The shaft puller is machined from 4130 steel and all major components are black anodized.
